SERVICE BRIEF

Hosted Exchange: Email in the Cloud

Reliable, scalable email solutions that deliver enterprise-class capabilities without the hardware and management overhead.

Cloud-Based Email Solutions

Email is absolutely critical to your business. Our Hosted Email Solution delivers the best in Microsoft Exchange without the hardware and management requirements.

Exchange can give your company many powerful tools. Putting them into action can vastly improve worker productivity and foster better collaboration between coworkers. However, without proper set up, you can run into some serious problems. These issues will cost your company thousands of dollars or more in wasted productivity and IT support.

Even if your Exchange server is managed proactively by an IT firm like USA Computer Services, hardware, electricity, and monthly management are all expenses required just to keep the server at your location. Hosting it on the USA Computer Services Cloud eliminates all of that overhead, saving you money.

Collaboration and Accessibility

Microsoft Exchange offers plentiful business-line capabilities to organize and streamline communication and collaboration.

Enable your users to collaborate with Microsoft Outlook and archive mail automatically.

Exchange hosting can vastly increase your productivity with collaboration tools, meeting schedulers, and much more. Best of all, your hosted Exchange server will be configured to the industry's best practices and security policies.

Exchange allows your company to have public folders - one or more locations all the time - to share files, email templates and more. You can even share any folder in your mailbox. With Exchange, your employee calendars can be viewed side by side to make it easier to schedule meetings and events.

Anywhere Access

Need access to email, contacts, and your calendar from anywhere? Exchange has you covered.

With USA Computer Services Hosted Exchange, you can rest assured that your server is set up with the tools necessary and the security your company needs to be successful. Exchange equips your workforce with the ability to check their email securely from their mobile device, or from any browser using the Webmail portal.

Sync your mailbox to your device and take your office with you. If you lose your phone, don't worry. With mobile device policies, we can wipe the device remotely to ensure that your sensitive data doesn't fall into the wrong hands.
